Region 10 Summary of Responses of 104(e) Letters

Lori Cohen
Superfund Dioxin Coordinator (M/S 525)

Chuck Morgan, Chief
Health Sciences Section (WH-527)

As requested in your 8/84 memo, this is a summary of the letters we have received in response to the 104(e) information requests we sent to Tier 2a sites. There are five Tier 2a sites in Region 10. We have received responses for each one, as summarized below. We do not plan to send additional 104(e) letters to any site at this time. We have not identified any additional Tier 2a sites since the initial site identification process.

Pasco Sanitary Landfill, WA. - This landfill received hazardous waste from Rhone-Poulenc (Tier 2 site) between 1972-74. We have received a combined response from the previous site operator and current site owner. The amount of waste, a waste characterization and data from five monitoring wells are provided.

Alkali Lake, OR. - This is a site where approximately 25,000 drums of pesticide waste were disposed of in 1967. The Oregon Department of Environmental Quality (DEQ) provided extensive background information on this site, including: correspondence files between EPA and DEQ, DEQ monitoring reports, and hydrogeology reports from the Oregon Research Center.

St. John's Landfill, OR. - This landfill is currently in operation. The Metropolitan Service District of Portland provided one response, since they have operated the site since 1980. They reported that no 2,4,5 trichlorophenol has been accepted since 1980. They have also provided information regarding the location of monitoring wells they've recently installed. For information regarding waste disposal prior to 1980, we contacted the City of Portland. They said the Oregon DEQ has this information. The FIT contractor, Ecology and Environment (E&E), will contact the State for this data.

Envirosafe, ID. - This is a hazardous waste landfill that has applied for a RCRA permit. The company provided a tabular summary of 2,4,5 TCP and related wastes received at the site. The summary lists the origin of wastes, a general waste characterization and quantity of wastes delivered. It also identifies the trench and tier in which above wastes were disposed.

Chemical Securities Systems, Inc., OR. -This is a hazardous waste landfill that has applied for a RCRA permit. The Company requested confidentiality under CBI for their response. No summary is provided here.

E & E is reviewing files on each of these sites to prepare sampling plans. Reconnaissance visits may be necessary to complete this work. Our schedule calls for the completion of the five sampling plans by April 1985, as directed by the EPA Headquarters strategy.

I understand that Leroy Folmar of your staff will be in Region 10 on January 7 & 8, 1985. We will review each of these sites with him in more detail. For further information, I can be reached at FTS 399-2712.
